

ASSIGNMENT 1

Using Employee schema write SQL queries for problems below. Please submit in LEA a single file with all solutions.

1. Return the name (last name + ' '+first_name) for all Female employees.
2. Return the total number of Male employees.
3. Return the top 3 highest salaries (only salary values not the employee name).
4. For each department return the department_name and total number of current employees in that department. Note that not all the employees from dept_employee table are current employees.
5. For each department return the department_name and the current manager name.
