

Drop employee schema that you created in the previous Laboratory and recreate it using file from Employee\_Schema.zip file (found under distributed documents in LEA). For this run the below statements from SQLPLUS. Note that the path depends on the location you unzip the files:

```
SQL> @c:\Users\OraUser\DATA\0.schema.sql;
```

```
SQL> @c:\Users\OraUser\DATA\1.employees.sql;
```

```
SQL> @c:\Users\OraUser\DATA\2.departments.sql;
```

```
SQL> @c:\Users\OraUser\DATA\3.dept_manager.sql;
```

```
SQL> @c:\Users\OraUser\DATA\4.dept_emp.sql;
```

```
SQL> @c:\Users\OraUser\DATA\5.salaries.sql;
```

```
SQL> @c:\Users\OraUser\DATA\6.titles.sql;
```

Test the result by running:

```
SQL> SELECT emp_no FROM employees;
```
