

Created the Orders schema and import data from Orders_Schema.zip file.

Create SQL statements corresponding to the following queries over the orders schema:

1. Return the name of all customers (contactFirstName + ' '+contactLastName) from Sweden.
2. Return the name, email and job Title for all office_employees with first name 'Leslie' with office code 1.
3. Return all products (name, code and vendor) with MRSP greater than 100\$.
